SUMMARY

HNDIT undergraduate at SLIATE with hands on fullstack development experience in PHP, Laravel, and MySQL, gained through building a complex, production-grade solo project involving real-time systems, APIs, and AI integration. Currently seeking a 6-month internship in Software Engineering / Fullstack Development to apply and grow these skills in a professional environment.

PROJECTS

R.K Fresh Flowers — Online Flower Shop Website | *HTML5, CSS, JavaScript*

- Designed and developed a multi-page static online flower website using HTML, CSS, and JavaScript.
- Created front-end pages including landing, login, product catalog, reviews, order form, and confirmation.
- Developed a flower showcase with categories, descriptions, prices, and customer testimonials.
- Implemented structured navigation, search interface, and page-to-page ordering workflow.
- Designed responsive UI using Flexbox, background images, hover effects, box shadows, and border-radius styling.

MediCare Connect — Hospital Management Web Application | *PHP, MySQL, HTML, CSS, JavaScript*

- Designed and developed a full-stack hospital management web application for Trincomalee Government Hospital, deployed on XAMPP local server environment.
- Implemented an OPD appointment booking system with automated time-slot capacity management (12 patients/slot), dynamic date validation, and automatic appointment number generation.
- Developed a Blood Bank Donor Management module with CRUD operations to register, store, and manage donor information.
- Built patient feedback and department-wise contact inquiry modules with rating collection, suggestions, and Google Maps integration.
- Implemented a secure admin panel with session-based authentication, prepared statements, and input sanitization.
- Created an admin dashboard to manage appointments, feedback records, contact messages, and donor details.
- Designed a responsive UI with interactive navigation, CSS animations, hover effects, and modern UI components.

Fisheries Market Price Predictor (FishFolia) — Full-Stack Developer & Lead Systems Architect | *Laravel 12, PHP 8.2, Python Flask, MySQL,Bootstrap, OpenWeather API, DOMPDF*

- Engineered a comprehensive AI-driven fisheries marketplace and fish price prediction web application using Laravel, Python Flask microservices, and MySQL.
- Integrated real-time weather/oceanographic data via OpenWeather API with AI models (Anthropic Claude and OpenAI ChatGPT) for 3-day fish price forecasts, monsoon impact analysis, and fishing suitability insights.
- Implemented role-based access control (RBAC) with dedicated Admin, Seller, and Buyer portals using secure authentication, middleware authorization, and BCrypt password hashing.
- Developed buyer-side features: price comparison, interactive cart checkout, order tracking, price alert notifications, and purchase history.
- Built seller management modules for inventory control, product listing, stock updates, order handling, and sales monitoring.
- Designed an administrative dashboard with BI analytics, automated PDF report generation via DOMPDF, notifications, and email via PHPMailer SMTP.
- Developed RESTful APIs, optimized database structures, and implemented secure full-stack solutions for a scalable, responsive platform.
